

TDK InvenSense Website & Developer Forum

Envision Workshop

About the Document

This document captures the outcomes of the TDK InvenSense Envision Workshop conducted online with Merkle in July & August 2025.

It consolidates key discussions into a synthesized view of the value proposition, target users, challenges, competitor insights and the future vision for the Website and Developer Forum.

Table of Content

Introduction

- Objective of the workshop
- Approach to re-imagine the experience of the TDK InvenSense website

Understand

- Understanding TDK InvenSense's vision
- Identifying key competitors
- Diving into key challenges

Evaluate

- Evaluating findings from UX audits, UX content and competitor research
- Assessing the current technical landscape

Envision

- Outlining the value proposition
- Identifying target users
- Understanding the current user journey
- Crafting the future experience

The Teams

Alberto Marinoni	Rashmi B.
Amel Zahid	Rick Silver
Calin Miclaus	Robert Vargas
Dawn Mortensen	Sanket Kulkarni
Fabio Pasolini	Scott Hedrick
Inessa Spiegelman	Shahab Muhammad
Jekwon Yoon	Shauna Zimmerman
Jim Siewko	Song Li
Massimo Mascotto	Stefano Zanella
Michelle Aylward	Taisei Justin Igarashi
Paul Ballas	Uday Mudoj
Rachel Ma	Viren Shah

Abdullah Shaikh	Nitin Kasture
Afreen Ansari	Phalguni Bhaumik
Alim Khan	Pradnya Salvekar
Bhagyashree Nagthane	Prakash Meghani
Giridhar Deshmane	Rittika Basu
Gopinath Krishnamurthy	Saranic Banerjee
John Krammes	Scott Allen
Kapil Dwivedi	Shakkeeb Mohammed
Mangena Venkatesh	Siddhant Dhillon
Manoj Deshmukh	Vipul Singhal
Melinda Rodrigues	

Introduction

Objective of the Workshop

TDK InvenSense engaged Merkle to help re-imagine its product website and developer forum into a connected, scalable and user-centric digital platform.

The ask was to modernize the experience to better serve diverse users - hobbyists, professionals and partners - by improving discoverability, enabling seamless access to technical resources and strengthening community engagement. This transformation is expected to position the platform as both a trusted source of product information and a catalyst for the ecosystem's growth.

Approach to Re-imagining the Experience of TDK InvenSense

Phase 1:
**Understanding
TDK's Eco-system**

Understand

What we did:

- Explored future expectations for the website and developer forum
- Analyzed the competitive landscape
- Assessed current challenges of the website
- Identified target audiences (hobbyists, professionals, decision-makers, distributors, students, etc.)
- Mapped the current user journey to highlight friction points

Outcomes:

Built a shared vision of what the platform needs to achieve

Gained a benchmark view of competitors and differentiators

Clarified audience needs and expectations to guide design

Established a baseline journey map to shape the proposed journey

NOW

NEAR

NEXT

Future Expectations for the InvenSense Website & Developer Forum

Establish the **foundation of trust and usability**.
This means:

- Fix outdated content and unclear navigation
- Provide baseline access to documentation, tools and forums

Focus Areas:

User Experience & Design

Position the website as solution-first, with sensing solutions at the forefront

Performance & Accessibility

Provide fast, mobile-friendly access worldwide, with parity in high-priority regions like China

Governance & Security

Communicate password complexity and email verification requirements clearly in UI/UX

NOW

NEAR

NEXT

Future Expectations for the InvenSense Website & Developer Forum

Expand into a **scalable ecosystem for growth**.
This means:

- Introduce multilingual support, modular CMS and AI-guided experiences
- Showcase TDK's innovation leadership and strengthen ecosystem play

Focus on Personalization & Growth:

Offer smart personalization by user type, location and behaviour

Optimize regional UX performance, with special focus on China

Build a scalable design system to accommodate developer forum, CMS, DAM and future micro-sites

Competitor Landscape

We conducted a competitor landscape analysis based on product lines

Diving into Key Challenges

Critical: Lack of UI Structure

- Lack of segmentation by region, language, or tier creates a **foundation problem**
- This weak structure amplifies other issues across navigation, discovery and credibility

Concerning: Ineffective User Journeys & Broken Flows

- Broken account flows, poor navigation and missing sales pathways create friction early on
- These failures delay development cycles and **block conversion opportunities**

Minor: Usability Frictions

- Unclear password rules and cookie consent gaps appear minor on the surface
- However, these usability blockers may compound the frustration of larger structural issues

Understanding Target Users

We identified the primary and secondary user groups to ensure that the site addresses the goals and challenges of these user groups

Needs of Target Users

The platform must serve as a **multi-layered ecosystem** - balancing *application-first exploration* with *spec-first depth*, while also acting as a hub for credibility, enablement and brand trust

Common Experience Requirements Across Hobbyists and Professionals

Outdated Product Information

Details, documents and software updates are unclear or outdated

Confusing Navigation

Product categories are unclear; limited search by application or specs

Scattered Developer Resources

Key technical assets are hard to find or scattered across pages

Difficult Distributor Access

Inventory and distributor information are not easily accessible

Part Number Confusion

Multiple part numbers make correct product identification difficult

Inconsistent Web Content

Pages show mismatched info and ignore past browsing preferences

Limited Self-Service

Peer/community support is weak for hobbyists and incomplete for professionals

Outdated Software Tools

Tools like Motion Link need updates and better part support guidance

Missing AI Intelligence

Absence of intelligent recommendations for products, tools, or comparison

Reference Design Gaps

Documentation not consistently clear, reliable, or easy to apply

Outlining the Current User Journey

We mapped how users currently navigate and interact with the site to uncover friction points and improvement opportunities

Understanding the Current Journey.

Jennifer Curran
Authorized Distributor / Channel Partner

• 38
Senior Procurement Manager at a global electronics manufacturer
Houston
Oversees sourcing of sensor components for large-scale product lines. Works closely with engineering and supply chain teams. Needs reliable access to product documentation, pricing, and fulfillment timelines. Often coordinates with TDK account managers and expects a premium, secure experience.

User Needs

- Quick access to product datasheets, pricing, and marketing materials
- Ability to track orders and manage client-facing documentation
- Secure, role-based access to distributor-only content
- Notifications about new product launches or updates

User Mindsets

- Strategic and detail-oriented
- Focused on accuracy, reliability, and long-term supplier relationships
- Expects a seamless digital experience that reflects TDK's global reputation
- Values transparency, responsiveness, and documentation integrity

Current User journey map

User steps What is each step of the user journey?	Awareness	Research & Planning	Ordering / Re-ordering	Delivery & Fulfillment	Usage & Monitoring	Support & Issue Resolution	Review & Loyalty
User actions What action does the user take during each step?	Receives marketing email about new sensor product. Clicks link to TDK public site.	Logs into distributor portal after manual approval. Searches for product specs, downloads datasheets & marketing assets. Compares with existing products	Contacts assigned TDK sales representative via email/phone. Shares requirements, confirms pricing & stock availability offline.	Coordinates with sales/logistics team for delivery updates. Receives shipment & required documentation from sales team.	Shares product info with OEM client. Collects performance feedback. Revisits portal for updated materials.	Shares product info with OEM client. Collects performance feedback. Revisits portal for updated materials.	Sends positive feedback via email. Opt-in for marketing updates and newsletters. Maintains periodic check-ins with sales contact.
Goals & experiences What is the user trying to accomplish?	Learn about new product capabilities. Verify market fit.	Gather all technical data to pitch product confidently. Ensure compliance & correct specs.	Confirm availability & finalize purchase terms through trusted sales contact.	Ensure timely delivery with all needed documents for client handoff.	Confirm product meets client expectations. Access updated documentation.	Resolve product or documentation issues quickly to maintain client trust.	Maintain strong partnership with TDK. Stay informed on upcoming launches.
Feelings and thoughts Use the emojis below to help illustrate how the user might be feeling. 😊 😊 😐 😐 😞	Curious, optimistic about new opportunity. 😊 😊	Focused, detail-oriented, cautious about missing specs. 😐	Relies on personal rapport with sales rep, wants quick responses. 😐 😐	Relieved when sales team provides proactive updates; frustrated if they must chase. 😐 😐 😞	Responsible for client satisfaction. 😊	Concerned about delays in email replies; relieved when issue is resolved. 😞	Appreciated as a partner; motivated to continue collaboration. 😊
Pain points What's not working well? What causes friction? How many people does this affect? On a scale of 'nuisance to show-stopper', how bad is this pain?	Generic marketing lacking tier-specific or technical depth.	Difficulty locating the latest assets or datasheets.	Waiting for manual confirmation from sales; potential delays in stock updates.	No direct tracking via portal; dependent on sales updates.	Dated documentation in portal slows OEM communication.	Email-based support can be slow; no centralized ticket history.	Feedback loop not visible; unsure if suggestions are acted on.
Opportunities How might we address these pain points? How big is the opportunity if we correct this pain point? What are new ways to serve this person?	Personalize awareness emails with tier-specific technical and market insights.	Improve search, filtering, and "latest version" indicators in portal.	Provide near real-time inventory data in portal for sales call prep.	Allow shipment status updates to be viewed in portal (pulled from logistics)	Enable portal notifications for updated materials	Introduce web form in portal for structured support requests (email-triggered).	Share "you asked, we delivered" updates to close feedback loop and build loyalty.

Authorized Distributor / Channel Partner

Technical Evaluator / Prospective Customer

Phase 2:
**Evaluating
TDK's Experience
Eco-system**

Evaluate

What we did:

- Conducted UX audits to uncover usability gaps and improvement opportunities
- Performed UX content review to assess clarity, consistency and findability
- Conducted competitor research to bring in outside-in perspective and experience insights
- Assessed the current technical landscape

Outcomes

Identified enhancement opportunities across design and content

Highlighted content clarity and governance needs

Captured best practices and differentiators from competitor analysis

Clarified technical strengths, gaps and dependencies to align design with feasibility and scalability

Interpreting UX Audits

We evaluated the site against UX best practices to uncover usability/accessibility issues, ensuring the experience meets user needs and industry standards

Findings from UX Audits

What our audit reveals: Key gaps in design & content

Our comprehensive audit identifies critical issues that impact usability and user trust

Design & usability issues:

Confusing Navigation

The current mega-menu structure is difficult to navigate, and users struggle to understand the difference between product detail and category pages

Visual & Functional Inconsistency

A lack of a consistent design system leads to a fragmented and unpredictable interface across the site

Poor Mobile Experience

Content does not adapt well to mobile devices, resulting in an inefficient layout and a frustrating user experience

Inefficient Search

The search function lacks essential features like auto-suggestions and filtering, making it difficult for users to find what they need quickly

Content & brand messaging issues:

Unclear Brand Story

The homepage fails to communicate brand mission, vision and core value proposition, leaving users unsure

Hidden Trust Signal

Important credibility indicators like certifications and legal information are not clearly visible, undermining user trust

Inconsistent Global Messaging

Untranslated headlines and image-based text on the Chinese site create a fragmented experience

This mismatch between live text and static graphics breaks consistency and weakens credibility

Misleading & Inconsistent CTAs

CTAs set false expectations, breaking trust at key moments. For example, “BUY NOW” suggests direct purchase but redirects to distributors, creating confusion and eroding confidence

Misleading & Inconsistent CTAs

Inconsistent Global Messaging

Evaluating UX Content

We evaluated how content is structured,
written and presented to the users currently

Analysis of UX Content & Voice

Defining Our Existing Content: A Voice Without a Vision

In the envision workshop, we defined the brand’s intended personality as a **“Visionary”** and **“Trustworthy Expert.”** This narrative is currently lost on the live site, which reads like a collection of isolated facts rather than a single, cohesive story that guides the user and builds confidence.

Current voice lacks a clear identity

Corporate & Boring

It comes across as boring, overly corporate and robotic. It presents facts without personality.

Timid & Lacking Confidence

It also lacks confidence. We miss opportunities to communicate our value and innovation clearly

Authoritative & Distant

Without a human touch, it can feel patronizing or overly authoritarian, rather than helpful

Wordy & Unfocused

High-level marketing pages are too dense, making it difficult for users to grasp our core value propositions quickly

Vague & Inconsistent Language

The same actions are described with different words across the site (e.g., confusing CTA labels), causing confusion

No Cohesive Story

The content on each page feels isolated. It lacks a unifying narrative that tells users who we are and why they should partner with us.

Summarizing Competitor Research

We examined how other players present their value online to
uncover best practices and opportunities for TDK's re-imagined site

Findings from Competitor Research

Our analysis reveals that leaders excel by creating a cohesive experience that builds a strong **information scent**¹, reassuring users they are on the right path with superior design and content.

What top competitors got right in DESIGN

Intuitive Navigation (Panasonic):

Leaders use clear, visually-driven page structures that are intuitive and easy for users to follow

Excellent Visual Presentation (Panasonic): A strong balance of high-quality imagery and clean typography enhances clarity and reinforces brand identity

Effective Search & Filtering (Bosch, Murata): Advanced search with effective filtering tools allows users to pinpoint the exact products they need with minimal effort. Advanced search with robust filtering is proven to be driver of **product findability**²

Responsive & Mobile-Friendly Design (Bosch): Seamless adaptation across devices ensures a consistent and high-quality experience for all users

¹ NN/g research on Information Scent shows users choose paths that offer strong cues they are heading in the right direction. <https://www.nngroup.com/articles/information-scent/>
² Baymard Institute research confirms that filter usability is paramount for product discovery on sites with large product catalogs. <https://baymard.com/research/ecommerce-product-lists?>

What top competitors got right in **CONTENT**

Strong, Action-Oriented CTAs (Texas Instruments): Leaders like TI use prominent, high-contrast buttons like **“Data sheet”** and **“Order now”**, **“Log in to order”** to establish a clear visual hierarchy and guide users directly to the most critical actions

Relational Tone of Voice (Bosch): A human-centered tone using words like "our community" builds a personal connection and fosters trust beyond technical specs

Strong, Action-Oriented CTAs (Panasonic, TI): Clear, prominent and compelling calls-to-action guide users purposefully through the conversion funnel

Clear Product Positioning (STMicroelectronics, TI): Competitors clearly articulate what makes their solutions unique, moving beyond features to communicate true value

Assessing the Current Technical Landscape

We audited the existing infrastructure, integrations and capabilities
to ensure the future experience is feasible, scalable and compatible

Assessing the Current Technical Landscape

During the technical assessment, several gaps and limitations were identified that need to be addressed to enhance the overall user experience and operational efficiency:

Specific Challenges

The current product website was **not designed or built to scale or adapt**

Distribution of materials has limited channels like emails and needs a dedicated limited login platform

Distribution of product info and **product communication channels need to be better connected**

Need **for seamless hosting for the China** region as it proves to be a prime hub of prospects

The current website is **not solution focused**, and users don't understand applications of a product in particular industry

The users **cannot access the relevant content in the developer forum** and not able to make full use of the FAQ's and answers already available on the platform

The current website **does not cater user specific content**, and everyone views publicly available content

Phase 3:
**Envisioning the
Future Experience**

Envision Workshop

What we did:

- Defined the Value Proposition by clarifying what the website is, why it is needed and who it serves
- Outlined the Future Experience by co-creating expectations for now, near and next to guide scalability
- Explored the Visual Direction by setting design guidelines to ensure a modern, cohesive identity
- Defined the New Voice & Tone by crafting UX copy principles to make the platform authentic, clear and companion-like
- Crafted the Proposed User Journey by mapping seamless navigation paths addressing both hobbyists' and professionals' needs

Outcomes

Established a shared north star for design and experience

Built alignment on the look, feel and voice of the reimagined platform

Defined user-first journeys that reduce friction and improve discoverability

Created a foundation for scalable growth and consistent brand expression

Outlining the Value Proposition

We broke down the value proposition of the TDK InvenSense site into what it is, why it is needed and who will use it, validated stakeholder inputs and built a shared understanding to guide future experience design

What is the TDK InvenSense site all about?

Product Discovery & Recommendations

- A **solution-first, application-guided** website rather than purely spec-driven
- A **platform that provides complete product information** to support informed customer decisions and competitive advantage
- A **spec table with filtering and comparison features** to help customers evaluate products easily
- A platform that **recommends TDK products** based on application needs

Sales & Distributor Enablement

- A **secure distributor portal for limited-login access** with up-to-date resources
- A **product catalog that connects buyers to distributor websites** for purchases

Community & Support

- A **developer forum offering discussions, documentation** and software resources, with potential for easier public access (benchmarking Bosch's model)
- A **site with role-based access to specific sections** and troubleshooting resources
- A **platform that offers human interaction options**, including physical store support

Marketing & Brand Engagement

- A **digital marketing engine** powering discovery, campaigns, solution awareness, lead capture and remarketing
- A **brand showcase for TDK Custom Sensing Solutions**, highlighting innovation, performance, reliability, capacity, low power, customer partnership and needs-based support
- A **brand positioning hub** designed to excite and attract leading consumer, industrial and automotive sensor customers

Content Management & Global Reach

- A **modular CMS enabling seamless content updates** and governance control
- A **platform for multilingual content delivery** to serve global markets

Why is TDK InvenSense website needed?

Product Discovery & Application Awareness

- **Help customers easily find products** that match their application needs
- **Clearly communicate the application possibilities** of TDK's diverse sensor portfolio and competitive advantages
- **Guide users to relevant content** based on their specific role or interest area
- **Offer cross-links to the full TDK sensor portfolio** beyond MEMS sensors to showcase breadth and encourage cross-selling
- **Modernize TDK InvenSense's digital presence** to reflect innovation leadership and prepare for scalable ecosystem growth

Customer Self-Service & Support

- **Provide a single “go-to” hub for FAQs**, software tools and drivers so customers outside the top 50 accounts can quickly find answers without delays
- Reduce support burden by **enabling customers to resolve queries independently**, lowering risk of lost opportunities due to slow response times

Developer Engagement

- **Enable developers to engage via forums**, access technical documentation and download tools
- **Maintain and clearly list supported part numbers for software tools** before download to avoid customer frustration
- **Highlight developer boards (e.g., Smart Motion DK)** to promote adoption

Trust & Market Positioning

- Communicate **TDK's partner-first approach** and build trust through transparent, accessible technical information
- **Position TDK as the top choice for global brands** in consumer, industrial and automotive sensors

Distributor & Partner Enablement

- **Provide a secure, role-based portal** for distributors to access up-to-date resources
- **Streamline distributor engagement** and product inquiries into a connected workflow
- **Enhance admin system** usability to ensure intuitive management for administrators

Global Reach & Discoverability

- **Ensure seamless performance and compliance across global markets** (including China)
- **Enhance lead generation through improved UX, SEO and content findability**
- **Support multilingual content delivery** for global accessibility

Who is going to use it?

Primary Users

Technical & Engineering Professionals

- **Design engineers** from design houses and system integrators
- Application teams from SoC or **MCU companies** for reference design
- **Hobbyists and professionals** experimenting with sensor technology

Business & Purchasing Decision-Makers

- **Purchasing decision-makers for OEM and Tier-1 supplier decision-makers** evaluating TDK as a trusted partner
- **Distributors and channel partners** seeking product and resource access

Students & Learners

- **Students** researching TDK's technologies and applications for academic projects

Media & Industry Influencers

- **Industry media, analysts** and influencers researching TDK for news coverage
- **PR professionals** looking for accurate product, solution and leadership information

Potential Employees

- **Potential employees**, contractors, interns and vendors exploring opportunities
- **Job seekers** worldwide learning about company culture, solutions and applications

Secondary Users (TDK's Internal Support Teams)

Sales representatives accessing tools and product information

Marketing teams coordinating campaigns and positioning

Developers building and testing with TDK products

Regional FAEs supporting engineering teams

Security & compliance teams ensuring readiness for global markets

Crafting the Future Experience

To re-imagine the TDK InvenSense site, we aligned on key experience factors such as navigation, discovery, tone, engagement and personalization

Shaping the Experience

Discovery of products: Application & Solution Focused

Thoughts

- Serve both needs:
 - Application (75%) – Developers exploring how TDK sensors can be used in their products
 - Solution (25%) – Developers seeking details/specs for a specific sensor they know or use
- Position TDK as the leader in showcasing sensor applications
- Leverage campaigns to highlight TDK as best-in-class and enable cross-sell opportunities

Navigation on the site: Guided and Direct

Thoughts

- Site organization issues require streamlined navigation
- Must cater to both “navigators” and “searchers,” as behaviors don’t always overlap

Personalization:

Personalized based on tiers

Thoughts

- Start with tier-based personalization
- Gradually expand to deeper personalization based on visit frequency and interaction levels

Tone of Voice:

Slightly more formal than narrative

Thoughts

- Informal tone is more inviting and relatable; shift to formal for technical content
- Balance TDK's formal style with "business casual" tone reflecting Silicon Valley roots
- Emphasize Innovation, Partnership, Trust (per positioning guide)

Engagement:

Individual Experience

Thoughts

- Community experience requires critical mass of users or sustained internal engagement
- Include a community element but keep it low-touch and well-moderated

Defining the New Voice of the Site

We explored various visual directions to gather preferences on tone, layout and style, helping define the visual language that best reflects the brand

Visual Strategy Blueprint for the reimagined site

Integrating key themes to guide the re-imagined experience

Strong typography, imagery & layouts

Key characteristics

- Clean, geometric layouts with balanced structure
- Bold and confident use of color for visual impact
- Strong typography that leads the design
- Playful, engaging arrangements that feel approachable
- Strategic mix of imagery and text for clarity and storytelling
- Well-structured alignment that guides the viewer's eye naturally

Understanding the New Voice of the Site

We defined the site's tone, style and personality to shape
how users connect with and trust the brand

Designing Our New Voice & Tone

Our Future Voice: The Trustworthy Expert Guide

To create an industry-leading platform, we will adopt a new voice designed to be as intentional and powerful as our technology. Using the **NN/g Tone of Voice Framework**¹, we will adopt a persona designed to guide, empower.

Our Persona: A Helpful and Confident Expert

We speak as a knowledgeable peer and visionary who is passionate about helping users solve complex problems.

We will sound...	We will NOT sound...
Visionary & Innovative	Boring or Robotic
Confident & Authoritative	Patronizing or Arrogant
Helpful & Relatable	Overly Corporate or Cold
Clear & Concise	Wordy or Vague

Our Emotional Goal: Inspire Confidence and Action

Every interaction should leave the user feeling:

- **Relieved** because they found exactly what they needed
- **Confident** because our content is clear, credible and trustworthy
- **Inspired** by the potential of our technology and curious to learn more

Our new voice is a strategic tool. We will immediately focus on using it to:

- **Write Clearer CTAs** that set precise expectations
- **Simplify Product Comparisons** to make technical decisions easier
- **Humanize Error Messages** to be helpful, not robotic

¹<https://www.nngroup.com/articles/tone-of-voice-dimensions/>

Crafting the Proposed User Journey

We designed the proposed journey to address challenges, streamline navigation and create seamless, goal-driven experiences for both hobbyists and professionals

Proposed User Journey

Reimagined User Journey for Tier I customers

Future user journey map							
User steps <i>What is each step of the user journey?</i>	Awareness	Research & Planning	Ordering / Re-ordering	Delivery & Fulfillment	Usage & Monitoring	Support & Issue Resolution	Review & Loyalty
User actions <i>What action does the user take during each step?</i>	Arrives via search, digital ads, social, TDK press articles, or referral links.	Lands on redesigned homepage with clear navigation: "By Product" & "By Application," plus smart search. Selects an application (e.g., gaming controller) to see relevant sensors and their capabilities. Browses product pages with top features, differentiators, downloads, software, and "buy now" + "get a quote" options.	Clicks "Buy Now" to see live distributor stock with direct purchase links OR fills out a smart quote form with instant acknowledgment & tracking ID. Can compare multiple distributors' prices & lead times.	Tracks delivery status via portal dashboard pulling in live distributor logistics data. Receives automated alerts for shipment milestones.	Uses sensors in client projects; revisits portal for updated docs, new firmware, and application guides. Developer forum offers categorized resources (IMU, microphone, ToF, etc.) plus FAE-created knowledge base.	Logs into portal to submit support requests with auto-routing to correct team (sales, tech, distributor). Tracks ticket status in dashboard. Searches forum for similar issues and official answers.	Receives personalized product update emails based on past activity. Completes periodic "partner feedback" surveys. Earns loyalty points for engagement and purchases.
Goals & experiences <i>What is the user trying to accomplish?</i>	Easily discover TDK and understand value proposition for their role (buyer, engineer, analyst).	Find exactly the right product/application fit quickly, with inspiring examples	Place or initiate purchases without friction. Compare options transparently.	Enjoy clear, proactive delivery tracking without chasing anyone.	Keep projects running smoothly with up-to-date resources and tools.	Get issues resolved quickly, knowing progress at all times	Feel valued as a long-term partner with rewards, recognition, and insider access.
Feelings and thoughts <i>Use the emojis below to help illustrate how the user might be feeling.</i> 	Excited to explore solutions; trusts TDK's professionalism. 	Confident in decision-making due to clarity of info. 	Empowered by transparency in stock, pricing, and lead times. 	Relaxed knowing delivery is on track. 	Supported and informed in technical execution. 	Secure knowing help is always available and trackable. 	Proud to partner with a leading brand. Motivated to keep the relationship active.
Pain points <i>What's not working well? What causes friction?</i> <i>How many people does this affect? On a scale of 'nuisance to show-stopper', how bad is this pain?</i>	Generic awareness content → Future: Role-aware landing and campaigns.	Current: Fragmented content navigation → Future: Seamless application & product-based navigation.	Current: Manual distributor outreach → Future: Integrated live distributor stock/pricing.	Current: No portal-based tracking → Future: Live integrated shipment status.	Current: Inconsistent document updates → Future: Auto-notified version tracking.	Current: Email-only support → Future: Portal-based ticketing + searchable forum KB.	Current: No structured loyalty feedback → Future: Recognition, updates, and visible feedback loop.
Opportunities <i>How might we address these pain points? How big is the opportunity if we correct this pain point?</i> <i>What are new ways to serve this person?</i>	Personalize homepage content by user role and behavior.	Embed "inspired use cases" in application pages to spark exploration.	Integrate distributor APIs for real-time stock & price visibility.	Create unified order & delivery tracking inside portal.	Segment developer forum by sensor type & expertise level.	Introduce omni-channel ticket tracking and community-powered solutions.	Launch loyalty/rewards system and "insider preview" program.

Proposed User Journey

Reimagined User Journey for Tier II customers

Future user journey map							
User steps <i>What is each step of the user journey?</i>	Awareness	Research & Planning	Ordering / Re-ordering	Delivery & Fulfillment	Usage & Monitoring	Support & Issue Resolution	Review & Loyalty
User actions <i>What action does the user take during each step?</i>	Discovers TDK through search, online ads, social content, or industry media.	Lands on a well-structured homepage with "By Product" and "By Application" navigation. Uses filters to find relevant sensors for their prototype. Views product detail pages with specs, features, differentiators, datasheets, and usage examples.	Clicks "Find a Distributor" button instead of sales contact form. Sees an updated distributor locator with location, specialization tags, and live stock indicators. Contacts distributor directly for pricing & availability.	Receives order and delivery updates from distributor via their system or email.	Uses sensors in prototypes. Accesses portal for updated technical docs, software downloads, and application guides.	For issues, first searches the portal's developer forum & knowledge base. If unresolved, contacts the distributor for support or escalation.	Returns to portal for new product info. May leave positive review in distributor channel. Keeps track of updates via newsletter or forum subscription.
Goals & experiences <i>What is the user trying to accomplish?</i>	Learn about credible sensor options for their project.	Get clear technical data and know exactly which distributor can help them.	Complete purchase quickly via a trusted distributor without unnecessary steps.	Ensure timely delivery coordinated through distributor.	Integrate product into design with minimal troubleshooting.	Solve problems quickly through self-service or distributor guidance.	Stay informed about relevant updates without heavy TDK involvement.
	Curious, eager to find the right fit.	Confident in search & discovery process; reassured by seeing distributor details.	Trusts distributor for transaction and logistics.	Relieved when distributor communicates clearly.	Productive and focused on project outcomes.	Empowered by having resources at hand; trusts distributor for escalations.	Appreciates smooth process; considers TDK a dependable brand.
Pain points <i>What's not working well? What causes friction?</i> <i>How many people does this affect? On a scale of 'nuisance to show-stopper', how bad is this pain?</i>	Current: Weak SEO & generic awareness → Future: Optimized digital campaigns and targeted landing pages.	Current: Poor filtering & hard-to-find docs → Future: Streamlined navigation and rich product/application pages.	Current: Confusion about who to contact → Future: No sales contact form; clear "Find Distributor" action with instant results.	Current: No tracking → Future: Distributors provide shipment tracking directly	Current: Missing usage examples → Future: Comprehensive guides and videos in portal.	Current: Support back-and-forth with sales → Future: Distributor-first support flow, forum self-service.	Current: Limited engagement → Future: Periodic updates & optional distributor-led promotions.
Opportunities <i>How might we address these pain points? How big is the opportunity if we correct this pain point?</i> <i>What are new ways to serve this person?</i>	Role-aware homepage content for smaller buyers/prototypers.	Showcase application-specific sensor sets to spark ideas.	Integrate distributor API for stock visibility in locator.	Provide distributor tracking links in portal for reference.	Segment forum by sensor type for easier troubleshooting.	Train distributors to resolve Tier 2 issues faster.	Build indirect loyalty through distributor relationships.

Information Architecture

We streamlined the Information Architecture from a fragmented, multi-tab structure into a unified, object-oriented model—reducing cognitive load, consolidating duplicate content and organizing the site around five clear, user-centered menus: Solutions, Applications, Products & Sensors, Tools & Support and Technology Categories.

Sitemap

Using `/[sub-landing-name]/[internal-name]` ensures a clear, hierarchical URL structure that reflects site navigation, improves SEO and keeps slugs consistent for both users and the development team.

E.g.: 1. Pressure Sensors
`/products/pressure-sensors`

E.g.: 2. Contact us
`/contact-help/contact-us`

News and media

TDK launches the SmartAutomotive™ 6-axis IMU with extended operating temperature range to worldwide distribution

IAM-20680HV 6-axis motion tracking device for cost-effective automotive in-cabin applications*

Proven operating temperature range up to +125 °C with specification guaranteed up to +105 °C

Leading low-noise performance and sensitivity tolerance for accurate positioning

Gyroscope offers a ±125 dps full-scale for enhanced navigation precision
